The u-extend modules enhance automation and IIoT applications, as well as control systems in the mechanical engineering and shipbuilding sectors, by providing additional communication and storage options. They can be attached to u-control M-series controllers via standardised interfaces without the need for tools. This increases the flexibility of application and expands the possibilities for digitalisation. The ease of use of the u-extend modules speeds up the integration of new modules, reduces engineering effort, and ensures the system is future-proof.
